Report on the Fifth Census of Live-Stock in India.

IN 1916, the Government of India, after consulting Local Governments and Administrations, decided that a census of cattle should be taken throughout British India between December, 1919 and April, 1920, and that this census should be repeated quinquennially thereafter. The Indian States were also invited to hold a similar census simultaneously with the British Provinces. The first all-India census was accordingly held generally in the cold weather of 1919-20 and the second during the same period of 1924-25. It was felt that the period of enumeration at these censuses, viz., from December to April, was too wide and that the value of results obtained was possibly vitiated to some extent by the inter-provincial movements of cattle. The desirability of holding the census simultaneously throughout India was also stressed by the Royal Commission on Agriculture in India. The third census was therefore held generally in January, 1930. The fourth census, was, with some important exceptions, held in January, 1935, but two provinces, namely, Bengal and Bihar and Orissa, were not able to participate at all in it, mainly owing to financial reasons. The fifth census, which is dealt with in this report, was held generally in January, 1940. On this occasion also, two provinces, viz., United Provinces and Orissa (newly constituted in 1936), were not able to take part in the census owing to the need for economy arising out of the present war. The results set forth in this report are, therefore, incomplete. Owing to her political separation, information relating to Burma has not been included in the table for British India, but this has been separately shown in table No. III along with the statistics of cattle, etc., in the principal foreign countries.

2. The classification of live-stock, which was adopted during the 1935 census, was further amplified for the census under report with a view to obtaining more complete information than was available previously, by providing for the enumeration of pigs and poultry and for recording the live-stock population separately for urban and rural areas. It will, however, be seen from the tables in this report that Bihar among the British Indian Provinces found itself unable to adopt the revised classification of live-stock; some of the Indian States, which have furnished returns, also found it necessary to adhere to the old classification.

3. The results of the fourth and fifth censuses held in British Indian Provinces are summarised in the following table. Figures, however, are not comparable in view of the non-participation of certain provinces as stated in para 1 above.

I.—British India (excluding Burma).

Tractors	3,991	4,621

* Excluding United Provinces and Orissa.

† Excluding Bengal and Bihar and Orissa.

4. A considerably larger number of Indian States participated in the present census as compared with the preceding ones, and this gradual increase in the area covered renders impossible any comparison with the totals recorded at previous censuses. The figures of the present census relate to about 79 per cent of the total area of Indian States, as compared with 66 per cent covered at the preceding census. The information is, therefore, still incomplete. The revised classification of live-stock was followed as far as possible by most of the States. The results of the present census are summarised below :—

II.—Indian States.
